

ARCANE TAROT

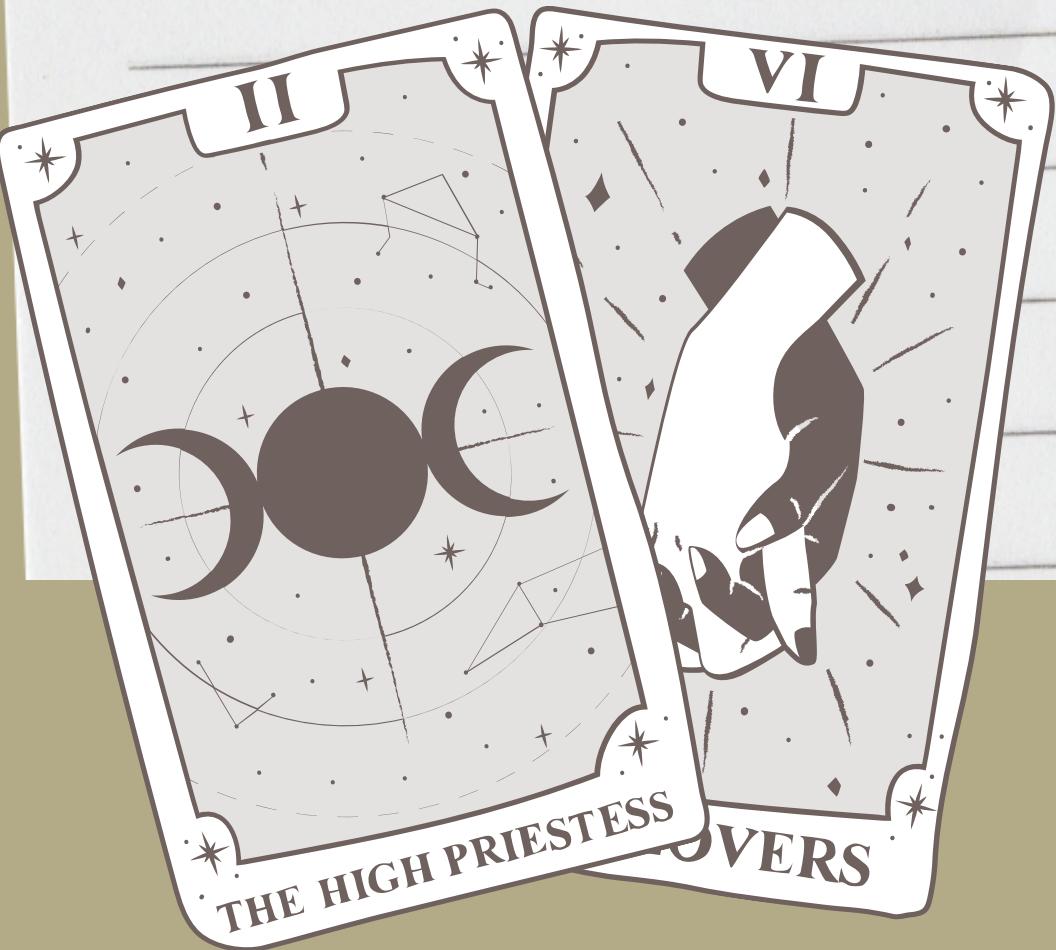

An EECS 1720 Project
(Proposal)

Jasmine, Christos,
Yuchen, Ian, & Ruoyu

What is Arcane Tarot?

Arcane: We are dabbling in a mystical aesthetic.

Tarot: For our Virtual Public Sculpture project, we want to incorporate the aesthetic and interactivity of *Tarot Cards*. We want to combine an AR experience with gaming-like aspects for this project. The details on what platform to host this project on are still in discussion. Users are planned to interact with the dynamic cards and read their fortune. We aim to program and design either The Cups, Wands, Swords, or Pentacles tarot sets.

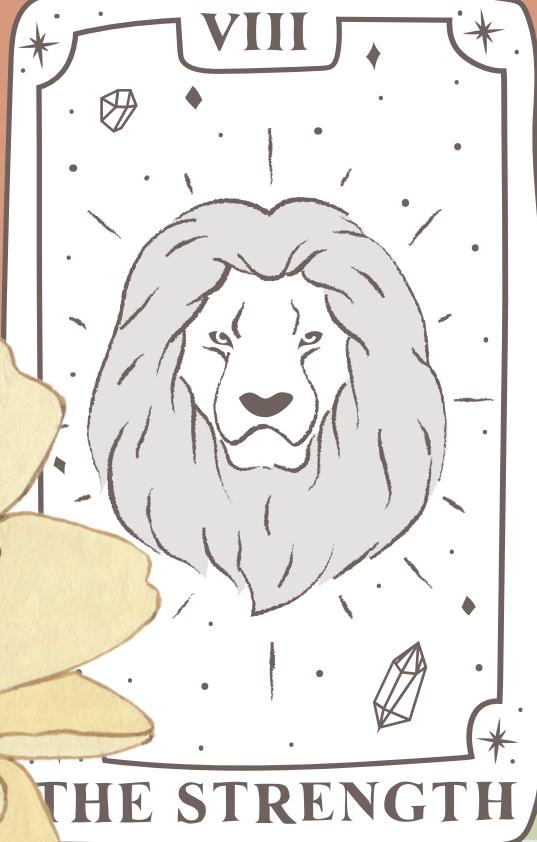

Group Contact Methods

We've congregated on Discord and will be using our server as the main form of communication.

Fulfilling Requirements

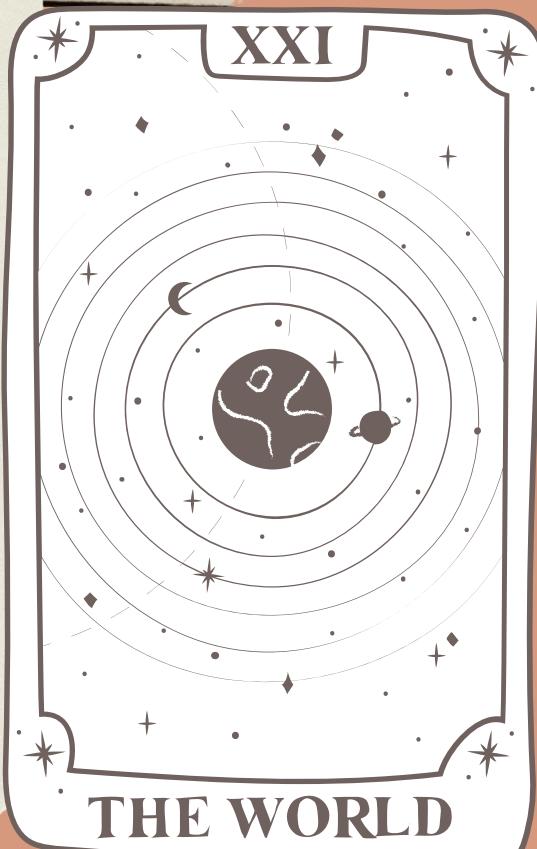

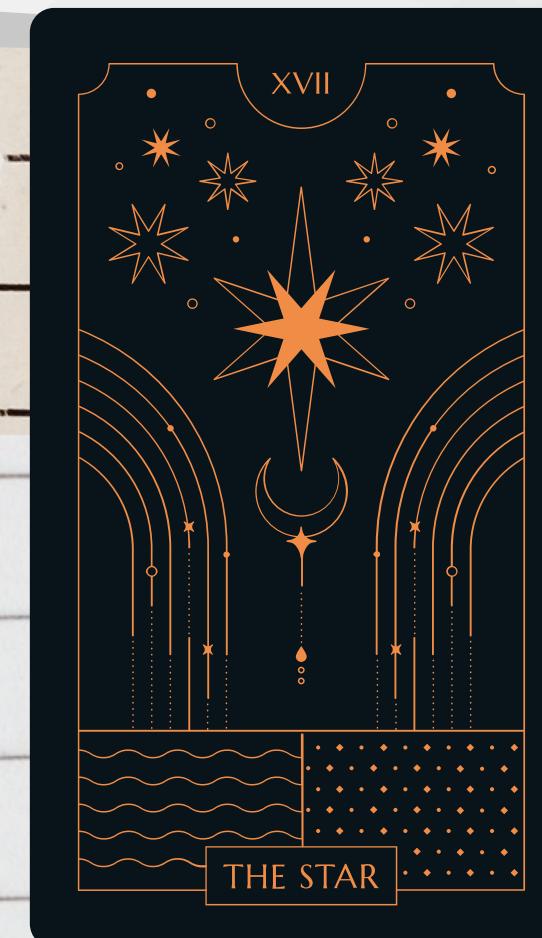

Aesthetic

- Each card will be designed by us -- adhering to an overall cohesive aesthetic and tone.

Interactivity

- Users interact with the tarot cards. Each one has a different meaning and will trigger an event based on what

Documentation

:O! Hell yeah. If we can add animation where the character on the card moves when you mouseHover, that would be so cool and then when you click and get the arcana desc, the full artwork can be there beside it

Christos

ChristosG 02/12/2022

I think it's a good idea, i'm a bit unfamiliar with it though
It seems very doable

Rouyu

Kekeby Today at 8:53 PM

I think we can add some text content to it for helping those beginners to get started with tarot, for example, once we click on a tarot, a note will pop up regarding to its history or representation etc.

Ian

Yeah

i guess use an array the size of the number of cards
place every number into it to determine where the cards will go

Yuchen

xxxycharlottxx Today at 6:55 PM

i will do some research about tarot ards
